Amendments to the claims

1. (Currently amended) The method of gathering and storing in a relational database eentaining selected content extracted from inbound Internet HTTP request messages sent to a Web server from a client remotely located Web browsers via the Internet, and further storing in said relational database selected content extracted from outbound Internet HTTP response messages sent from said Web server to a client said remotely located Web browsers, said method comprising the steps of:

providing a gateway <u>server coupled to said relational database and</u> interposed in the communications pathway between said <u>Web</u> server and said client the <u>Internet</u> and utilizing said gateway <u>server</u> to perform the steps of:

receiving each of said inbound request messages from a elient one of said Web browsers and forwarding each of said inbound request messages to said Web server,

extracting a first selected set of data contained in predetermined request data fields in each enes of said inbound request messages and storing said first set of data in corresponding addressable request data storage locations in said relational database, said request data storage locations being defined by a schema for said relational a database,

receiving each of said outbound <u>response</u> messages from said <u>Web</u> server and forwarding each such outbound <u>response</u> message to <u>a client</u> <u>one of said Web browsers</u>,

extracting a second selected set of data contained in predetermined response data fields in ones of each of said outbound response messages and storing said second set of data in corresponding addressable response data storage locations defined by a schema for said relational database,

whereby said <u>relational</u> database is populated with information which describes the past use of said server.

- 2. (Canceled)
- 3. (Original) The method set forth in claim 1 wherein said step of receiving and forwarding each of said inbound <u>request</u> messages is performed before or concurrently with said step of extracting data contained in predetermined ones of said inbound <u>request</u> messages.
- 4. (Original) The method set forth in claim 3 wherein said step of receiving and forwarding each of said outbound messages is performed before or concurrently with said step of extracting data contained in predetermined ones of said outbound messages.
